Appendix D: All Opportunities ROI Detailed Overview

This appendix provides an auditable financial view of each validated automation opportunity. Results are modeled using Automat-IA's Conservative Scenario Framework unless indicated otherwise. Financial figures are rounded to the nearest hundred.

C.1 Portfolio Summary Table

Workflow	Opportunity	Annual Benefit ($)	Estimated Cost ($)	FTE Savings	Payback (months)	Weekly Hours Saved
{{workflow_1}}	{{opp_1_name}}	{{opp_1_benefit}}	{{opp_1_cost}}	{{opp_1_fte}}	{{opp_1_payback}}	{{opp_1_hours_week}}
{{workflow_2}}	{{opp_2_name}}	{{opp_2_benefit}}	{{opp_2_cost}}	{{opp_2_fte}}	{{opp_2_payback}}	{{opp_2_hours_week}}
{{workflow_3}}	{{opp_3_name}}	{{opp_3_benefit}}	{{opp_3_cost}}	{{opp_3_fte}}	{{opp_3_payback}}	{{opp_3_hours_week}}
...	...	...	...	...	...	...

Use the portfolio summary to compare opportunity scale, cost, and realization pace at a glance. Detailed per-opportunity pages follow.

C.2 ROI Insights – {{workflow_name}} / {{opportunity_name}}

Performance Summary. Under the conservative scenario, estimated annual benefit is **${{annual_benefit}}**, equivalent to **{{fte_saved}} FTEs** or approximately **{{annual_hours_saved}} hours per year**, with an expected payback of **{{payback_months}} months**.

C.2.1 Key Metrics Table (Conservative Scenario)

Metric	Value	Notes
Annual Benefit	${{annual_benefit}}	Realized value at steady state under conservative assumptions
Estimated Implementation Cost	${{implementation_cost}}	Software, integration, training, change management
Payback Period	{{payback_months}} months	Cost recovery timing based on conservative benefit
1-Year Net Benefit	${{net_benefit_y1}}	After ramp-up and operating cost in Year 1
3-Year Net Benefit	${{net_benefit_y3}}	Cumulative at conservative rates
5-Year Net Benefit	${{net_benefit_y5}}	Cumulative at conservative rates
FTE Saved	{{fte_saved}}	Assuming 2,080 hours per FTE
Annual Hours Saved	{{annual_hours_saved}}	Derived from time study and PIF inputs
Weekly Hours Saved	{{weekly_hours_saved}}	Operational planning metric

All values modeled under Automat-IA Conservative Scenario.

C.2.3 Business Impact Components

Impact Area	Key Metrics	Description
Time Savings	{{annual_hours_saved}} hours per year	Reduction in manual effort from automated steps
Quality Impact	{{errors_avoided}} errors avoided per year • {{error_reduction_pct}} percent reduction	Based on baseline error rate, rework minutes per error, and modeled reduction
Revenue Uplift	${{revenue_uplift}} per year • {{hours_reallocated}} hours reallocated	Value from redeploying capacity to revenue-generating activities
Ramp-Up Period	{{ramp_months}} months	Time to reach steady-state efficiency and adoption

For this opportunity, the majority of measurable benefit is driven by **{{dominant_component}}**. Quality and revenue impacts are modeled conservatively or omitted where supporting data is

insufficient. Ramp-up accounts for adoption and stabilization so Year-1 results reflect achievable performance.

C.3 Modeling Notes and Traceability

- Calculations follow the Automat-IA ROI Calculator and Conservative Scenario Framework.
- Inputs originate from validated PIF responses, stakeholder interviews, and documentation review; see **Appendix D: Data Provenance and Audit Trail** for respondent names, roles, dates, and any midpoint assumptions.
- When quality or revenue data is not verified, values are held at zero until validated to avoid inflating benefit.
- Payback is computed as Implementation Cost divided by Annual Benefit multiplied by 12.
- FTE conversions assume 2,080 hours per year unless client-specific contracts dictate otherwise.

C.4 Replication Template

Use the following section for each additional opportunity. Duplicate C.2 for every item, replacing variables accordingly:

- Section title with workflow and opportunity name
- Performance summary paragraph
- Conservative table
- Business Impact Components
- One-paragraph interpretation of dominant drivers and ramp-up

This ensures consistent, auditable presentation across all opportunities and keeps the main report focused on synthesized insights while the appendix provides full financial detail.
